

DBMS — Unit 4 Assignment

Secure Hosted PHP–MySQL Mini Project

Course: Database Management System

Unit: Unit 4 — Advanced SQL and PL/SQL

Individual Assignment

Submission deadline: 14 September 2026, 11:59 p.m.

Maximum marks: 10

Submission Link:- [Click Here](https://tinyurl.com/DBMS-TA2) (<https://tinyurl.com/DBMS-TA2>)

1. Assignment objective

Develop and host an individual, database-driven web application using **HTML/CSS, PHP, and MySQL**. The project must be deployed on **InfinityFree** and must demonstrate secure connectivity between the front end, PHP back end, and MySQL database.

This assignment extends the class demonstration:

**HTML Form → PHP Server-side Program → MySQL Database → SELECT
Result → Browser Output**

The purpose is to demonstrate that you can independently design a small real-world application, store form data in a database, retrieve it in a browser, and write secure SQL code.

2. Core problem statement

Each student must select **one unique mini-project problem** from the allotted list below, or propose an equivalent problem after faculty approval. Develop a functional, hosted website that

solves the selected problem using PHP and MySQL.

Your project must be different from the **Student Feedback Entry System** demonstrated in class.

Strict uniqueness rule

- **No two students in the same class/division may use the same project statement.**
- Project topics will be allotted on a **first-come, first-approved basis** through the topic-approval sheet/form.
- A mere change of title, field names, colours, or labels is **not** considered a different project.
- Do not submit any variation of the classroom Student Feedback form, such as course feedback, teacher feedback, canteen feedback, website feedback, event feedback, or product feedback.
- Before starting implementation, enter your selected topic in the topic-allotment field of the submission form or obtain faculty approval.
- Students submitting duplicate or copied problem statements may be asked to change the topic and resubmit; marks may be reduced.

3. Mandatory technical requirements

3.1 Front end

Your application must contain:

- A meaningful home page.
- At least one HTML form to collect data.
- Proper labels for all form fields.
- Client-side validation using appropriate HTML attributes such as **required**, **type="email"**, **min**, **max**, **pattern**, etc., wherever relevant.
- Navigation links to the data-entry page and record-list page.
- Basic CSS for a clean and readable user interface.

3.2 PHP and MySQL back end

Your hosted application must contain:

- A separate database connection file, for example `config.php` or `db.php`.
- MySQL database hosted on InfinityFree.
- At least one table with a primary key.
- Appropriate data types and **NOT NULL** constraints.
- An **INSERT** operation that saves form data.
- A **SELECT** operation that displays stored records in the browser.
- At least one additional feature: **search/filter**, **update**, or **delete**.
- A `.sql` file containing **CREATE TABLE** statements and at least 3–5 sample records.

3.3 Security requirements — compulsory

All SQL queries that contain user input must use **prepared statements with ? placeholders and parameter binding**.

For example:

```
php
$stmt = mysqli_prepare(
    $conn,
    "INSERT INTO books (title, author, category) VALUES (?, ?, ?)"
);

mysqli_stmt_bind_param($stmt, "sss", $title, $author, $category);
mysqli_stmt_execute($stmt);
```

The following insecure style is not acceptable:

```
php
$sql = "INSERT INTO books (title, author) VALUES ('$title',
'$author')";
```

In addition, you must:

- Validate important input on the PHP server side.
- Use `htmlspecialchars()` while displaying database values in HTML.
- Avoid showing database passwords in screenshots or reports.
- Keep database credentials in a separate connection file.
- Do not display detailed database errors to normal users on the public site.
- Use dummy/sample data only. Do not collect real sensitive personal information.

3.4 Hosting requirement

- Host the complete working application on **InfinityFree**.
- The submitted URL must open in an incognito/private browser window without requiring a login.
- The application must remain online and functional until marks are declared.
- Test the form submission and record display after deployment.

4. Available project statements

Select **one** statement only. Each statement can be allotted to only one student in the class/division.

No.	Project title	Brief problem statement and minimum features
1	Book Catalogue Manager	Store book title, author, category, price, and availability; view and search books by title/category.
2	Library Issue Request System	Accept book-issue requests with student details and book ID; display requests and update request status.
3	Lost and Found Item Portal	Submit lost/found item details, location, date, contact, and status; list and filter items by status.
4	Campus Event Registration System	Add event registrations with participant details, event name, and department; list registrations and search by event.
5	Workshop Registration Portal	Register students for technical workshops; show registered participants and update registration status.

**College of Engineering &
Management, Amravati**

Approved by AICTE, New Delhi, Govt. of Maharashtra
and Affiliated to SGBAU, Amravati

An Autonomous Institute

Pote Estate, Pote Patil Road, Kathora, Amravati (Maharashtra) - 444604

Ph. No. - 0721-2970110, 9322604312, 8668894851, 9021972226 Email : principal@prpoteatilengg.ac.in, prpoteatilcollege@gmail.com Website : www.prpoteatilengg.ac.in

6	Seminar Attendance Registration	Store participant name, roll number, seminar title, and attendance state; view/filter attendance entries.
7	Blood Donor Directory	Register donor name, blood group, city, contact, and availability; search by blood group and city.
8	Medicine Availability Enquiry	Store medicine name, company, quantity, price, and availability; search by medicine name.
9	Pharmacy Order Request System	Allow customers to submit medicine order requests; view requests and update order status.
10	Canteen Food Pre-order System	Add food orders with item name, quantity, pickup time, and order status; display current orders.
11	Hostel Complaint Register	Allow residents to lodge hostel complaints; view complaints and update status as Open/In Progress/Resolved.
12	Classroom Maintenance Request	Record requests for projector, fan, light, bench, or cleanliness issues; display and update request status.
13	Campus Equipment Borrowing System	Request issue of equipment such as projectors, laptops, or lab kits; display issue records and return status.
14	Sports Equipment Booking System	Book sports equipment with student details and date; show bookings and availability status.
15	Lab Slot Booking System	Enable booking of laboratory time slots; display bookings and search by laboratory/date.
16	Faculty Appointment Request System	Students request an appointment with a faculty member; display requests and update approval status.
17	Doctor Appointment Request System	Store patient appointment requests with doctor, date, and time; list appointments and update status.
18	Vehicle Service Booking System	Accept service bookings with vehicle details, service type, and date; view and update booking status.
19	Bike Rental Booking	Store customer, bike, rental dates, and booking status;

	Register	display active bookings.
20	Taxi/Travel Booking Enquiry	Accept travel booking enquiries with source, destination, travel date, and passenger count; list enquiries.
21	Tourist Place Visit Planner	Store visitor trip plans with destination, date, number of persons, and budget; search by destination.
22	Hotel Room Enquiry System	Submit room enquiries with guest details, check-in/check-out dates, and room type; update enquiry status.
23	PG/Hostel Room Enquiry Portal	Store accommodation enquiries with preferred area, budget, room type, and contact; display/filter enquiries.
24	Job Application Tracker	Store job applications with applicant name, company, job role, application date, and status; update status.
25	Internship Application Portal	Collect internship applications with skills, preferred domain, resume-link field, and status; list applications.
26	Placement Drive Registration System	Register students for company placement drives; view registrations and filter by company.
27	Resume Review Request System	Students submit resume-review requests with name, branch, resume link, and status; update review status.
28	Alumni Contact Directory	Store alumni name, graduation year, company, designation, and city; search by year/company.
29	Student Achievement Record System	Add student achievements such as competition, award, year, and level; view/search achievement records.
30	Scholarship Application Tracker	Store scholarship applications with student data, scholarship name, income category, and approval status.
31	Student Certificate Request Portal	Students request bonafide, transcript, or other certificates; display requests and update status.
32	Leave Application Management System	Submit student leave applications with dates and reason; list applications and update approval status.

33	Parent–Teacher Meeting Booking	Parents book meeting slots with student details and preferred date/time; display bookings.
34	Study Material Directory	Store title, subject, unit, resource link, and uploader name; search material by subject or unit.
35	Notes Request System	Students request notes by subject and unit; list requests and update fulfilment status.
36	Online Quiz Registration Portal	Register learners for a quiz with name, email, topic, and preferred slot; view/filter entries.
37	Project Idea Repository	Add project title, domain, description, technology, and guide requirement; search by domain.
38	Research Paper Reference Manager	Store reference title, author, publication year, area, and link; search references by keyword/area.
39	Department Notice Archive	Add notices with title, category, date, and description; display and filter notices by category.
40	Club Membership Registration	Register college-club members with name, branch, club, and interest area; view membership list.
41	Volunteer Registration System	Collect volunteer details for an activity, availability, skills, and event preference; update allocation status.
42	Donation Collection Register	Store donation item type, quantity, donor alias/name, date, and distribution status; list records.
43	Animal Adoption Enquiry Portal	Collect adoption enquiries with adopter name, preferred animal type, city, and status; list enquiries.
44	Pet Vaccination Reminder Register	Store pet name, owner contact, vaccine date, next due date, and status; search by due status.
45	Plant Nursery Order Enquiry	Record plant-order enquiries with plant type, quantity, delivery city, and status; view orders.
46	Grocery Delivery	Accept grocery requests with item, quantity, delivery locality,

	Request System	and order status; display requests.
47	Laundry Service Request System	Submit laundry pickup requests with item count, pickup date, and service type; update request status.
48	Mobile Repair Service Request	Record customer mobile repair requests with device model, issue type, and status; display records.
49	Computer Repair Ticket System	Users submit computer repair tickets with device type, problem description, and priority; update ticket status.
50	Wi-Fi/Internet Complaint Portal	Record network complaints with location, issue type, and contact; list complaints and update resolution status.

Equivalent self-proposed topic

A student may propose a different topic only if it is:

- Small enough to implement individually.
- Clearly different from all allotted topics and the classroom feedback demo.
- Suitable for HTML + PHP + MySQL hosting.
- Approved by the faculty before development.

5. Suggested minimum pages

The actual names may differ, but your application should contain a comparable structure:

text

project_folder/

—	index.php Home page / entry form
—	config.php Database connection file
—	save.php Secure INSERT operation
—	view.php Display records using SELECT
—	search.php Search/filter OR update.php/delete.php
—	style.css Optional external CSS
—	database.sql Table creation and sample data
—	README.pdf Short project report

— screenshots/ Required evidence screenshots

Do not upload `config.php` with live database credentials to a public GitHub repository. If you use GitHub, submit `config.example.php` with placeholder values and submit the actual hosted code only through the ZIP/Drive submission route.

6. Required screenshots

Create a folder named `screenshots` and include the following screenshots:

1. Home/data-entry form.
2. Completed form before submission.
3. Successful insert confirmation.
4. Record-list page showing saved data.
5. Search, update, or delete feature working.
6. Security test: a harmless input containing a quote, such as `O'Reilly`, stored/displayed safely.
7. InfinityFree-hosted URL open in the browser.

Do not include database username, password, phpMyAdmin login, or other private credentials in screenshots.

7. Required README/report

Submit a concise **4–6 page PDF report** named:

text

`RollNo_Name_README.pdf`

The report must contain:

1. Student name, roll number, division, and project title.
2. Selected problem statement.
3. Objective and main features.
4. Technology stack: HTML/CSS, PHP, MySQL, InfinityFree.
5. Database table design with column names, types, primary key, and constraints.

6. A simple ER diagram or table schema.
7. Explanation of the application flow from form to database to browser output.
8. List of SQL operations used: INSERT, SELECT, and search/update/delete.
9. A short explanation of prepared statements and why they are used.
10. Hosted application URL.
11. Test cases and output screenshots.
12. Declaration of original work.

8. Submission instructions

Submit using the Google Form below:

Google Form submission link: [Click Here](#)

Submit the following through the form

- Full name.
- Roll number.
- Division.
- Selected project title and statement number.
- Hosted InfinityFree URL.
- Google Drive folder link with Viewer access.
- One ZIP file of the complete project.
- **database.sql** file.
- README/report PDF.
- Screenshots or a single PDF containing screenshots.
- Originality declaration.

Mandatory file naming format

text

RollNo_Name_ProjectTitle.zip

RollNo_Name_database.sql

RollNo_Name_README.pdf

Google Drive folder format

text

RollNo_Name_ProjectTitle/

- |— source_code/
- |— database/
- |— report/
- |— screenshots/

Before submitting, ensure that your Google Drive folder is shared as **Anyone with the link — Viewer**, unless another sharing mode is specifically instructed.

Important security rule

If user input is concatenated directly into SQL statements, such as using `VALUES ('$name')`, the prepared-statement component of security marks will not be awarded. SQL injection prevention through parameterized/prepared queries is a compulsory part of this assignment.
